**To Whom It May Concern,**

It is my pleasure to recommend Tyler Bowman, who served as a software Development (AI) intern with Seaweed Underwater Cameras. As the Vice President of R&D, I had the opportunity to work closely with Tyler during a pivotal time in our startup's development as we prepared for our first product launch.

Tyler contributed significantly to the creation and deployment of our custom AI models for fish detection. He demonstrated an exceptional ability to learn quickly, which enabled us to build and test models across both Google Cloud Platform (GCP) and Amazon Web Services (AWS). His efforts were instrumental in helping us deliver a functional, high-performing AI-enabled underwater camera system on a tight timeline—an achievement that led to our technology being featured during Shark Week on the Discovery Channel.

Tyler's involvement has extended beyond the initial launch. He has helped us build and refine a robust testing and validation pipeline for field data, enabling our team to iterate and improve model accuracy as we receive new images and video from our customers. His initiative, reliability, and problem-solving skills have made him an invaluable contributor.

What truly sets Tyler apart is not just his technical talent, but his ability to balance excellence in multiple domains. He has achieved success not only in his work with Seaweed, but also as a dedicated student and athlete. It is rare to find someone who can operate at such a high level across so many areas.

I am confident that Tyler has a very bright future ahead of him, and I fully endorse him for any opportunity that he chooses to pursue. He will be an asset to any team fortunate enough to have him.

Please feel free to contact me if you would like to discuss Tyler's qualifications further.

**Sincerely,**

**Mitch Giannini**
